

nullcoin

The organizers of **Nullcon9** decided pay out the HackIM bounty through their own coin - nullcoin.

In the initial test transaction **Nullcon9** paid 100 nullconis to **Jailer**.

The transaction was successfully mined and 100 nullcoins were transferred to Jailer. However the greedy Jailer attacked and took down the blockchain running in test environment.

Nullcon decided to investigate and collect all the digital evidences possible.

Here are few artifacts recovered by the investigators, the only part missing was the nonce & the transaction signature which was added to the block to get the Block Signature as :

With the below given information you are required to

1. reconstruct the transaction block,
2. sign it with the private key of **Nullcon9**
3. mine it (find the nonce) to get the signature :

9999990b707d6d10d3121eadc054a21d1e9855f679fe1b096c05beb0273c591d

The correct nonce will award you 300 nullcoins

The block :

```

Technical specifications :

1. *The sender's and receiver's public/private keys are ECDSA keys generated from <https://keybase.io/warp>*
2. *From a partially recovered image it is clear that the SHA256 hash of the block without nonce was :*

This online tool allows you to generate the SHA256 hash of any string. SHA256 is designed by NSA, it's more reliable than SHA1.

Enter your text below:

```
